**Draw Odds** - # of 1st choice applicants plus successful applicants for every one tag sold

**% Return** - Percent of hunter return cards received compared to total tags sold

**# Succ. Hunters** - # of hunters who successful harvested an animal based on hunt questionnaire results

**% Hunter Success** - based on # of successful hunters divided by total tags sold (includes did not hunts; a portion of nonreturns are assumed to be successful)

**TABLE 10. BULL HARVEST AGE TRENDS BY UNIT GROUP, 2001 - 2007**

Starting in 2001 bull hunters were asked to submit front incisors for cementum annuli analyses to determine the age of the bull. The age analyses was conducted by Matson's Laboratory. Bull elk teeth were not formally collected in 2002 except from Area 11 and 22 and were not collected in either 2004 or 2005 statewide.

**TABLE 11. PREDICTED NET B&C SCORE OF HARVESTED BULLS BY UNIT GROUP, 2001 - 2007.**

Each bull was aged by tooth cementum annuli analysis. The predicted Boone & Crockett (B&C) score was based on a polynomial regression or growth function using a subset of known scored antlers associated with the bull's independent variables - known age, point class and select antler measurements (G4 and H4). The data from harvested bulls of unknown score were then applied to the growth function to predict each net B&C score. Only 3-year old and older bulls were used in the analyses.
