

HUNTER INFORMATION SHEET
PRONGHORN ANTELOPE
Area 22 & 24
Units 221, 222, 223, & 241

LOCATION: Northern Lincoln and southern White Pine Counties. See unit description in the big game brochure.

ELEVATION: Approximately 4,600 to 6,000 feet in most portions of the hunting area where antelope are found.

TERRAIN: Rolling or undulating, open type country.

VEGETATION: Desert shrubs in lower valley bottoms to low sagebrush and pinyon/juniper at the upper end of valley benches. Alfalfa fields in the Lund area may hold some antelope. Permission to hunt should be secured prior to entering any private lands.

LAND STATUS: The majority of land within this hunting area is public land administered by the Bureau of Land Management. Some private land parcels occur throughout the harvest units.

HUNTER ACCESS: Good throughout the harvest units. Private land parcels have little influence on hunter access. Four wheel drive is recommended. **Note:** Please be aware that sections of these units are in wilderness areas. Motorized equipment, mechanized transport, including wheeled game carriers and chainsaws, are prohibited in wilderness areas. Contact the Federal Management Agency responsible for this area for more information.

MAP REFERENCES: Topographical maps are available from the U.S. Geological Survey and possibly from B.L.M. local offices and sporting good stores. The 1:100 000 topographical maps that cover these hunting units are: **Ely, Nevada-Utah; Garrison, Utah-Nevada; Wilson Creek, Nevada-Utah, Caliente, Nevada-Utah, Duckwater, Nevada, and Quinn Canyon Range, Nevada.**

FACILITIES AND SERVICES: The towns of Ely, Lund, Pioche and Caliente provide most services. Primitive camping is available throughout most of the hunting area.

RECOMMENDED HUNTING AREAS FOR ANTELOPE: Antelope are generally associated with water sources during August. Water sources vary from perennial streams to small springs and artificial water developments. Hunters should become familiar with the area by becoming familiar with a map which identifies various water sources. Antelope in these hunt units are found scattered throughout Cave, Steptoe, White River, Dry Lake, and Delamar valleys. Antelope may also be found west of highway 93 in the western portions of Lake and Spring valleys. Antelope are in moderate densities throughout the hunting area. Using spotting scopes and binoculars early in the mornings or late in the afternoons to locate antelope may be the most effective method of hunting.
