# BACK

Bighorn sheep are the most visible state animal and make a stately silhouette against the sky, standing at a mountain cliff. Bighorns use their horns to circulate and cool their blood in the hot summer temperatures, as well as for battle. Males are called rams, females are ewes, and young are lambs. Desert, chaparral, and alpine vegetation comprise their diet. They are expert mountain climbers and usually travel in herds. Hunting of this big game species is regulated.
