PUBLIC HUNTING LIMITED ON WILDLIFE MANAGEMENT AREAS AND DESIGNATED STATE LANDS

ALKALI LAKE WILDLIFE MANAGEMENT AREA (WMA), BRUNEAU RIVER WMA, FERNLEY WMA, FRANKLIN LAKE WMA, HUMBOLDT WMA, SCRIPPS WMA, STEPTOE VALLEY WMA and WAYNE E. KIRCH WMA

1. Hunting is allowed every day for wildlife species upon which there is an established open season

MASON VALLEY WMA

1. Before or after any waterfowl season, hunting is allowed every day for wildlife species upon which there is an established open season.
2. During any waterfowl season open within the hunt zone, hunting is permitted only on Saturdays, Sundays, Wednesdays and the following legal State holidays: Nevada Day, Veterans Day, Thanksgiving, Family Day (day after Thanksgiving), Christmas, New Years Day, and Martin Luther King Day. Hunters with a valid turkey tag for the Mason Valley WMA may hunt each day of the established turkey season.

FT. CHURCHILL COOLING POND COOPERATIVE WMA

1. The Ft. Churchill Cooperative Cooling Pond Wildlife Cooperative WMA is closed year-round to all hunting.
2. From October 1, through the Friday preceding the second Saturday of February, the area shall be closed to trespass.

OVERTON WMA

1. Before or after any waterfowl season, hunting is allowed every day for wildlife species upon which there is an established season.
2. Waterfowl hunting is permitted on the Moapa Valley portion of the area on:
 - a) the opening day of the earliest opening waterfowl season,
 - b) even days thereafter through the end of regular duck and goose seasons,
 - c) the closing two days of any duck and goose season, and
 - d) during any youth waterfowl hunt.
3. Upland game bird and rabbit hunting is prohibited during the regular duck and goose seasons, except for persons possessing a valid wild turkey tag to hunt turkeys in the Moapa Valley of Clark County. These persons may hunt turkeys every day for which the tag is valid. These persons are prohibited from pursuing any other upland game birds or rabbits during such time that the fall turkey season is concurrent with the waterfowl season.
4. During the waterfowl season on the Moapa Valley portion of the area, hunters must hunt from assigned hunt locations (blinds) constructed by the Department of Wildlife. A maximum of up to four hunters are permitted at each hunt location. Assigned hunt locations are marked by numbered stakes. Hunters shall hunt only within their assigned hunt location and moving to vacant locations is prohibited. The only exception involves reasonable accommodation of the disabled.
5. During the opening day and the first weekend of the dove season, the maximum capacity for the Moapa Valley portion of the area is 60 hunters by reservation. Vacancies will be filled by stand-by hunters on a first-come, first-served basis.
6. On Overton Hunt days, only persons authorized to hunt waterfowl may use vessels on the portion of the area inundated by Lake Mead.

KEY PITTMAN WMA

1. Before or after any waterfowl season, hunting is allowed every day for wildlife species upon which there is an established season.
2. Waterfowl hunting is permitted on:
 - a) the opening weekend of the earliest opening waterfowl season within the hunt zone,
 - b) odd-numbered days thereafter through the end of regular duck and goose seasons,
 - c) the closing two days of any duck or goose season, and
 - d) during any youth waterfowl hunt.
3. The maximum hunter capacity during the opening day of duck season and the opening day of goose season will be 55 at any time.
4. All hunters will check-in and out at the main entrance and will park in designated parking areas only. No vehicles are allowed on the area during the hunting season.
5. The area is closed to fishing during the waterfowl season.
6. No motorized boats are allowed on the area during the waterfowl season.

OVERTON-KEY PITTMAN HUNTER RESERVATION SYSTEM

1. To guarantee an opportunity to hunt, reservations must be made for the following specified days of each hunt listed:
The Key Pittman WMA
 - a) The earliest opening day of the general duck and goose seasons.

The Moapa Valley portion of the Overton WMA

- a) Opening day and the first weekend of the dove season.
- b) The entirety of any open waterfowl season.

Special Regulation for the Moapa Valley Portion of the Overton WMA: A person or his representative applying for reservations for group hunting will be limited to up to four hunters per party.

2. Dove Reservation Process:
Hunters wishing to make reservations for opening day and the first weekend of the dove season at the Overton WMA will do so via an application process detailed on the NDOW web site at www.ndow.org. Unless their privilege is limited or revoked pursuant to law, any resident or nonresident is eligible to have their name included on one application for each hunt day for which reservations are required. A person whose name appears on more than one application for each hunt day for which reservations are required will be rejected from the drawing. Hunters will be permitted to draw only one reservation during this mail-in application process unless there are less than 60 applicants on a day for which reservations are required. Applications for the dove hunt at the Overton WMA shall be received at the Headquarters Office in Reno (through a postal service only) no later than the second Wednesday in July. A public drawing will be held at the Headquarters Office in Reno at 10:00 a.m. on the last Wednesday in July. Successful applicants will receive a reservation confirmation by return mail. Successful reservation holders will be allowed to substitute one person of a hunt party but that substitute must not have been included in an application of the mail-in process or part of a stand-by group.
3. Waterfowl Opening Day/Weekend Reservation Process:
Hunters wishing to make reservations for the first two hunt days of the earliest opening duck and goose seasons at the Overton WMA and the opening day of the duck and goose seasons at the Key Pittman WMA will do so via an application process detailed on the NDOW web site at www.ndow.org. Unless their privilege is limited or revoked pursuant to law, any resident or nonresident is eligible to have their name included on one application for each hunt day for which reservations are required. A person whose name appears on more than one application for each hunt day for which reservations are required will be rejected from the drawing. For the Overton WMA, hunters will be permitted to draw only one reservation through the mail-in application process unless there are available blinds on a day for which mail-in reservations are required. Applications for these waterfowl hunt days shall be received at the Headquarters Office in Reno (through a postal service only) no later than the second

Wednesday in September. A public drawing will be held at the Headquarters Office in Reno at 10:00 a.m. on the last Wednesday in September. Successful applicants will receive a reservation confirmation by return mail. Successful reservation holders will be allowed to substitute one person of a hunt party but that substitute must not have been included in an application of the mail-in process or part of a stand-by group.

4. Waterfowl Remainder of Season Reservation Process:

Reservations for the remainder of the waterfowl hunting season at the Overton WMA will be available the Monday prior to the opening of the waterfowl season and must be made in person (or by a representative) at the Las Vegas office, Henderson office, Overton WMA or on the NDOW website at www.ndow.org. Hunters that are successful during the mail-in application process for the first two hunt days must use those reservations before making reservations for the remainder of the season. An individual may reserve no more than one assigned hunt location on the Moapa Valley portion of the area for no more than four individuals to hunt as a party and this reservation must be utilized prior to reserving another hunt day. The reservations must be in the hunter's possession and be shown to the check station attendant to constitute a valid reservation for the day specified. At the Key Pittman WMA, reservations for hunting will be required only on the earliest opening day of the regular duck season and goose seasons. All hunters will check in at the main entrance on the opening day of waterfowl season. For the remainder of the waterfowl season, hunters will complete a reservation card obtained from the Frenchy Lake or Nesbitt Lake check station box and deposit the card in an appropriate drop box for each day hunted. Failure to turn in a completed card at the Key Pittman WMA or failure to check out at the Overton WMA may result in a citation being issued, and the loss of hunting privileges for the remainder of the season. No vehicles are allowed on the areas during the hunting season.

5. During the waterfowl season at the Overton WMA, an assigned hunt location program will be in effect. Hunters will make a reservation for one of three types of hunt locations (field, pond or bulrush plot) and the specific hunt location will be determined by a drawing at the check station prior to each day's hunt. NDOW reserves the right to adjust blind availability and blind assignments based on the conditions present on the day of the hunt.
6. A hunter with a reservation will be considered as a "no-show" if he does not present himself at the check station by one full hour before shooting time, except that at the Overton WMA, a hunter with a reservation will be considered a "no-show" if he does not present himself at the checking station one and one-half hours before shooting time during the waterfowl season.
7. Standby hunters must register at the check station upon arrival.
8. All reservations, permits and assigned hunting locations are nontransferable.

STATEWIDE SUMMARIES FOR UPLAND GAME SPECIES GREATER SAGE-GROUSE

Nevada Department of Wildlife personnel, volunteers and federal agency personnel conducted 1,680 lek counts at 849 leks during the spring of 2019. The effort represented 248 fewer lek visits than in 2018, largely due to weather and the inability to get to several leks because of excessive snow and mud (particularly in northeastern Nevada). Peak male lek attendance for 2019 was 7,098, which was down from the 2018 and 2017 peak observations of 8,134 and 9,828 males respectively. Trend lek data resulted in an average of 18.8 males per lek, which represented an eight percent decline from 2018 and a 24.5 percent decline from the 20-year (1999-2018) average attendance of 24.9 males per trend lek (Figure 1).

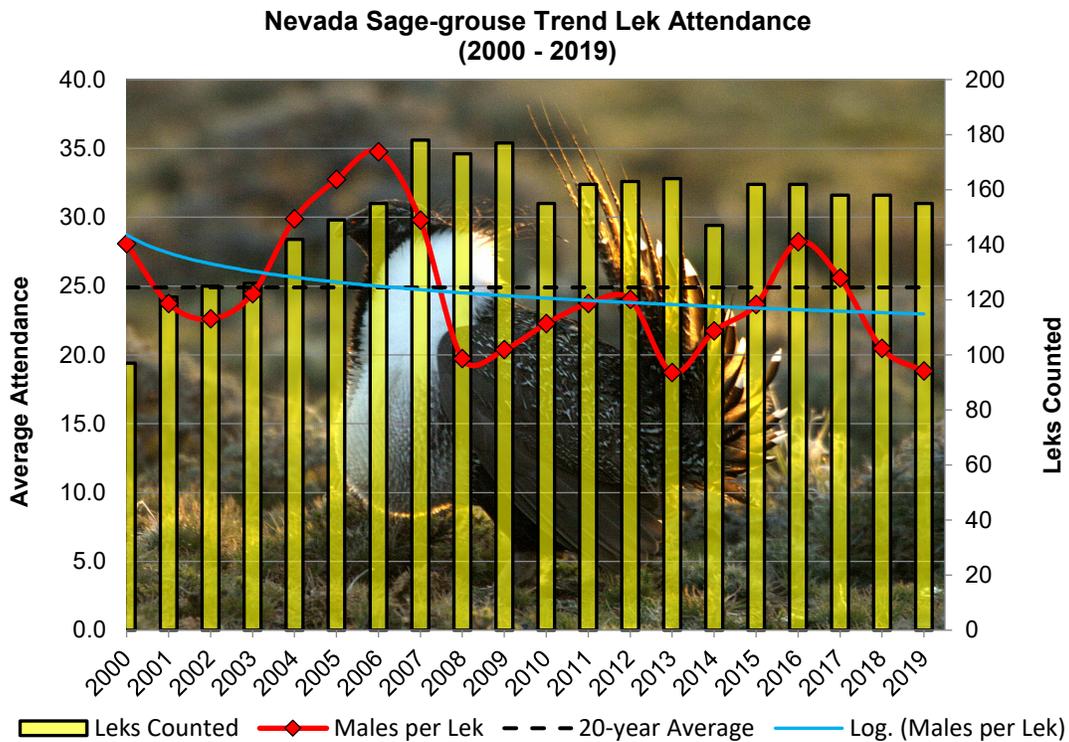

Figure 1. Average Greater sage-grouse male lek attendance rates in Nevada from 2000-2019.

Sage-grouse hunters provided 1,138 wings during the 2018 season, which was a reduction from the 1,278 wings provided in 2017. Statewide production was estimated at 0.9 chicks per hen, which was well below the 10-year average of 1.5 chicks per hen. The poor production follows relatively poor production in 2017 (n=1.0 chicks per hen); however, recruitment averaged 1.54 chicks per hen from 2014 through 2016 which may have prevented lek attendance rates from declining further (Figure 2).

Adult survival rates estimated from several different study sites in Nevada have declined over the last three years as well. We expect the lack of recent recruitment and lower survival rates to lead to further population declines in Nevada.

Annual Sage-grouse Production from Wing Collection Data

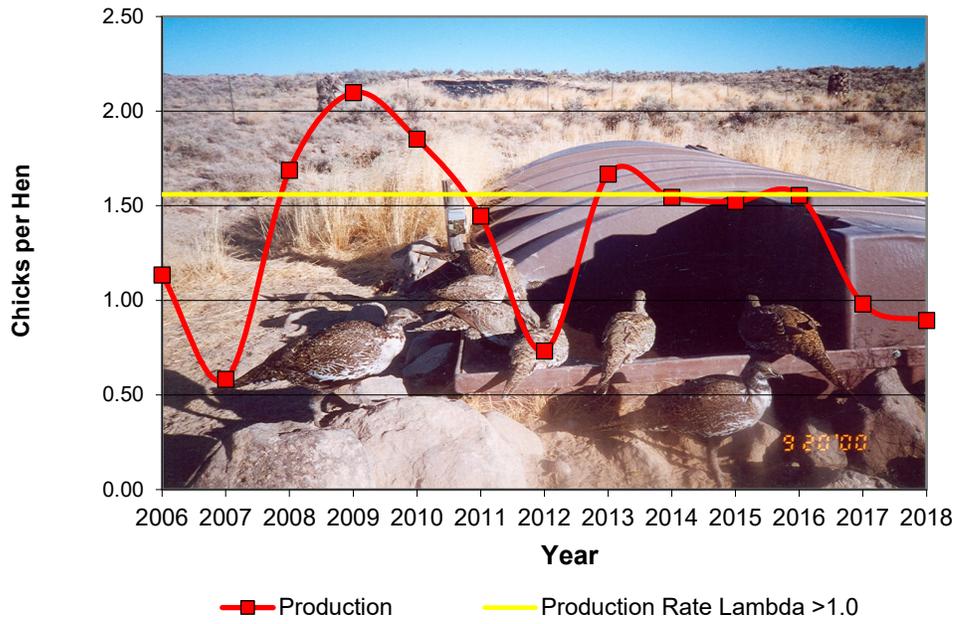

Figure 2. Greater sage-grouse production estimates in Nevada from 2006-2018.

FOREST GROUSE

Blue Grouse (Dusky and Sooty Grouse)

No formal surveys were conducted statewide for either sooty or dusky grouse. However, a research effort was initiated during the 2018 field season in eastern Nevada investigating the ecology of dusky grouse in the Schell Creek and Egan Ranges in White Pine County. Utah State University research crews captured 47 dusky grouse during the 2018 field season composed of 29 adults and 18 chicks. Of those, 8 males and 34 females were banded, while 23 hens received GPS tags (15 store-on-board solar backpacks, 2 Argos solar backpacks, and 6 store-on-board necklace-style transmitters).

Photo credit: Mark Enders

In addition to capture and marking work, research crews located ~88 brooding dusky grouse hens, with broods ranging in size from 1–8 chicks per hen. Locations were recorded for each brood. These research efforts will help us gain a better understanding of dusky grouse habitat use and movement profiles, vital rates, monitoring techniques and perhaps help estimate population trends.

Ruffed Grouse

Drumming surveys were conducted in late May through mid-June of 2019 at several occupied or suspected to be occupied sites. Surveys were delayed due to weather conditions and access to the sites. Excessive spring runoff challenged detectability of drums at many sites.

In northwestern Nevada, 7 points were surveyed in the Pine Forest Range with one auditory detection. In the Santa Rosa Range of eastern Humboldt County, three auditory detections made across 9 points that were surveyed.

In the central portion of the state, no drums were heard over 12 survey points within Birch Creek in the Toiyabe Range. Elsewhere in the Toiyabe Range, surveys were attempted near Stewart Creek, but access was too difficult to perform point surveys across the entire transect. However, one ruffed grouse was visually observed during the attempt, demonstrating occupancy of the site.

In northeastern Nevada, a survey was conducted in Copper Basin adjacent to the Jarbidge Mountains in June of 2019. Detections of drumming ruffed grouse were recorded at 3 of 22 points surveyed. Surveys were also attempted within the Tuscarora Range and near Merritt Mountain; however, snow and muddy road conditions prevented access to the survey sites.

Sharp-tailed Grouse

Monitoring conducted in the spring of 2019 of the three known Columbian sharp-tailed grouse (CSTG) leks near the Bull Run Basin release site in northern Elko County recorded 34 males in attendance. Additionally, a fourth, previously unknown lek was discovered in late April of 2019 with 15 males in attendance. This new lek was located to the south of the previously known leks. The presence of 49 males that persevered through the winter, and the broader distribution of leks, is encouraging. During the summer of 2018, the South Sugarloaf fire burned 220,000 acres of habitat either occupied by, or adjacent to this population of CSTG.

The continued presence of males and the early successional recovery of the habitat in native perennial grassland in many areas of the fire, provides for a hopeful outlook although there are several areas of the fire where non-native invasive annual grasses have established. Preliminary analysis conducted by Mathews et al. (In Review) using an integrated population model that incorporates lek counts and demographic data (2013-2017) indicates that CSTG populations are forecasted to increase through 2022 (Figure 3). We will continue to monitor this population through traditional lek counts, brood surveys, and potentially through the use of aerial infrared surveys to detect new lek sites.

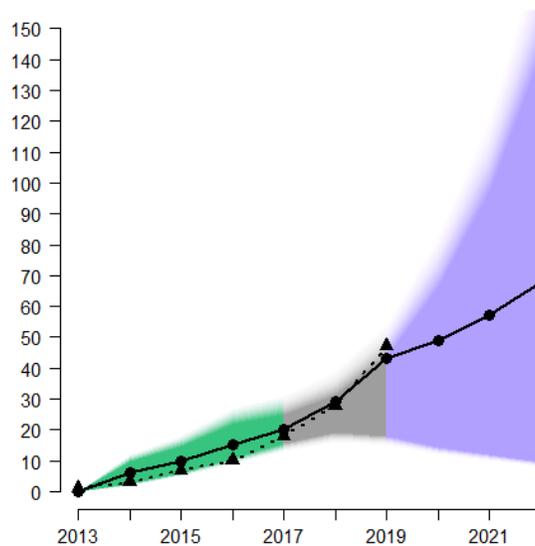

Figure 3. The expected number (solid line) and observed flush count (dashed line) of male CSTG in north-central Nevada from 2013-2022. Preliminary data are subject to revision.

PARTRIDGE

Chukar Partridge

Northwestern Nevada (Humboldt and Washoe County)

Brood surveys conducted in northwestern Nevada during late August of 2018 found approximately 5.4 chicks per adult in the Santa Rosa Range and a paltry 0.7 chicks per adult in the Pine Forest Range. An informal survey of the northern Black Rock Range in early August found five coveys of birds ranging in size from 8 to 38 birds and totaled 106 birds. Notable production was only observed in one covey while all the other coveys consisted of adult birds. A more recent ground survey conducted in the Calico Mountains resulted in the observation of 95 birds consisting of 40 young of the year birds and 55 adults, resulting in 0.7 chicks per adult. Overall bird numbers still appear at a level to provide some fair to good hunting opportunities though.

West Central Nevada (Churchill County)

More encouraging results were observed within mountain ranges surveyed in Churchill County. The chicks per adult ratio averaged 6.7, which suggests that populations in eastern Churchill County are rebounding. Hunting in the Stillwater, Clan Alpine and Sand Springs ranges is considered fair to good, especially during the winter months if these ranges receive a snowpack that moves birds to lower elevations.

Northeastern Nevada

Some more favorable results were also documented during a recent informal survey within the Meadow Creek/Bruneau River drainage where five older age class broods were observed with good numbers of chicks throughout. Limited observations of chukar coveys near Tuscarora also indicated that production was better than that observed in northwestern Nevada. Some observation of gray (Hungarian) partridge indicate very good production for that species.

Gray Partridge

No harvest data were collected after the 2018-2019 upland game season and no formal monitoring was conducted for this species.

HIMALAYAN SNOWCOCK

Post season snowcock questionnaire results indicated that 64 hunters reported spending 177 days in the field pursuing the species, averaging 2.8 days per hunter during the 2018 season. One hundred hunters responded to the questionnaire, but 36 indicated that they did not hunt. Eleven of the hunters reported harvesting 13 birds with at least 12 coming from hunt unit 102 and one questionable location.

The reported harvest was up by two birds compared to 2017. Four birds were reported as being wounded and lost. Past reported harvest has ranged between 2 and 23 birds annually and has averaged approximately 8 birds per year since 1980.

Hunters reported that they observed 441 snowcock while hunting in 2018, a similar number to the reported observation of 450 birds in 2017.

QUAIL

California Quail

No harvest data were collected after the 2018-2019 upland game season and no formal monitoring was conducted for this species.

Gambel's Quail

No harvest data were collected after the 2018-2019 upland game season and no formal monitoring was conducted for this species.

Mountain Quail

No harvest data were collected after the 2018-2019 upland game season and no formal monitoring was conducted for this species.

The Nevada Department of Wildlife has invested considerable resources into establishing and augmenting mountain quail populations within suitable habitat through an aggressive translocation program over the last decade. Augmentations have taken place in the Stillwater Range in Churchill County and the Vya Rim in Washoe County.

In addition, population establishment efforts have taken place in the Bilk Creek Range in Humboldt County, Buck Mountain in White Pine County, Fish Creek Mountains in Lander County, and more recently in Hendry's Creek in the northern Snake Range within White Pine County.

Over 1,100 wild caught mountain quail have been released during these augmentation and translocation efforts.

WILD TURKEY

Spring turkey hunting opportunities were available across 10 different hunt areas during 2019 and a total of 186 tags were issued for the 2019 spring turkey season. Hunt Unit 115 of White Pine County had the most tags available (n=35) while the fewest were issued for Hunt Units 151 and 152 combined (n=4). The reporting rate for all turkey tags issued was 75 percent. This was lower than expected and is largely attributed to the private land hunts (38 percent for Lyon County and 55 percent for Paradise Valley of Humboldt County).

Of the 139 questionnaires returned, 10 people indicated that they did not hunt, leaving a remainder of 129 individuals that hunted. These hunters reported a 57 percent success rate (n=73 turkeys) overall while spending 411 days hunting and 307 days scouting. Each hunter averaged 3.2 days in the field pursuing turkeys. Of the birds harvested, 90 percent (66 toms) were mature birds with an average beard length of 7.8 inches. Overall, the number of birds harvested declined for the first time since the 2013 season. During the five-year period from 2014-2018, spring turkey harvest was increasing at a relatively steady rate (Figure 4).

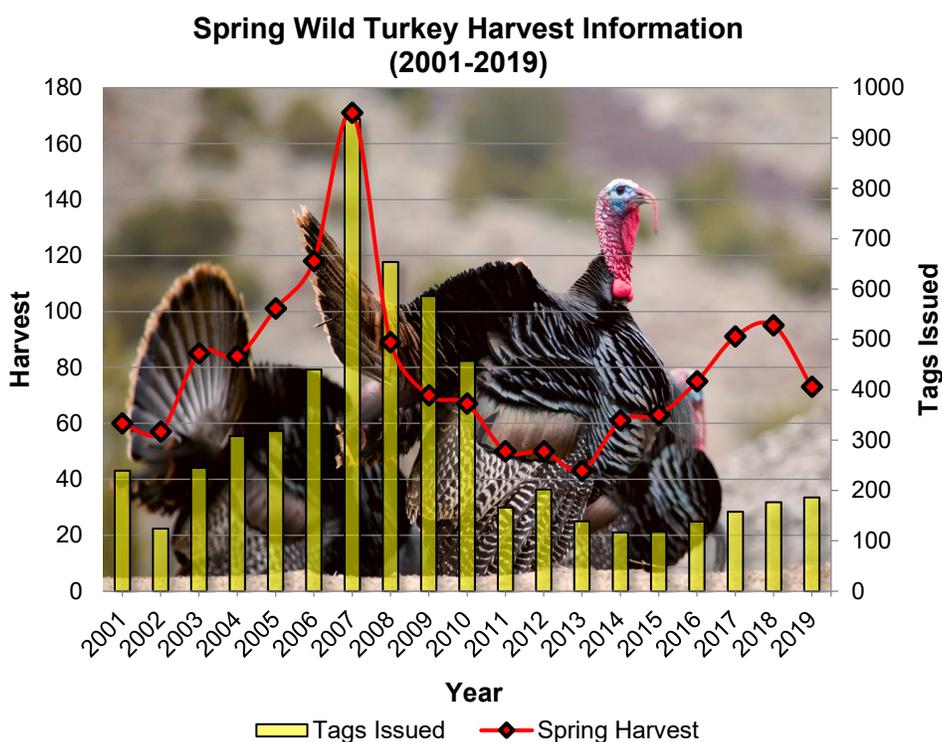

Figure 4. Spring turkey harvest history and number of tags issued from 2001-2019.

High success (>60 percent) was reported within Hunt Unit 115 of White Pine County, Paradise Valley of Humboldt County, Moapa Valley of Clark County, Lincoln County, Hunt Units 151 and 152 of Lander County and Hunt Unit 101 of Elko County. Alternatively, rather poor success rates (<35 percent) were reported for Hunt Units 102 and 065 of Elko County and the Mason Valley Wildlife Management Area of Lyon County. Overall, the statewide success rate of 57 percent declined from 64 percent in 2018 and 75 percent in 2017. This decline was largely attributed to lower success rates for the Mason Valley Wildlife Management Area and Hunt Unit 102 and 065. The number of tags was reduced for both hunt areas for the spring of 2020. For complete results represented in a statewide summary table, please see Appendix A-X.

PHEASANT

No harvest data were collected after the 2018-2019 upland game season and no formal monitoring was conducted for this species.

COTTONTAIL RABBITS

No harvest data were collected after the 2018-2019 upland game season and no formal monitoring was conducted for this species.

WHITE-TAILED RABBITS

No harvest data were collected after the 2018-2019 upland game season and no formal monitoring was conducted for this species.

STATEWIDE SUMMARIES FOR MIGRATORY GAME BIRDS

WATERFOWL

Season Structure and Limits

Using the guidelines of Adaptive Harvest Management (AHM) and the frameworks established by the United States Fish and Wildlife Service (FWS), the 2018–2019 duck hunting season allowed for a liberal season length and general bag limit, with specific bag limit restrictions for duck species that continue to remain below continental objectives. The Nevada Board of Wildlife Commissioners (Commission) adopted the full number of days (107) for Nevada allowed under the framework.

For the 2018–2019 duck hunting season, Nevada continued with a three-hunt-zone configuration. Nevada opted for a split season in all three zones. Each zone closed for a two-day period on October 22 and 23, 2018. These closures were statewide and excluded from the following season dates. Nevada's 2018–2019 duck hunting season began in the Northeast Zone on September 22, 2018 and extended until January 6, 2019. The duck hunting season for the Northwest Zone began October 6, 2018 and extended to January 20, 2019. The duck hunting season for the South Zone began October 13, 2018 and extended to January 27, 2019. The two-day closures accommodated days set aside for youth waterfowl hunting, which was two days in each of the three zones (Northeast Zone: September 8 and 9, Northwest Zone: September 22 and February 2, and South Zone: February 9 and 10). Additionally, the South Zone included a special youth hunt day on Overton Wildlife Management Area on October 13. The Commission adopted a later opening date (October 27, 2018) for the Moapa Valley portion of the South Zone.

Species restrictions continue to be in place with hunters allowed to take no more than two hen mallards, two redheads, two pintails and two canvasbacks of either sex. Scaup restrictions were for the 2018–2019 season were set for a three-bird daily bag limit and an 86-day season (Northeast Zone: September 22 to December 18, 2018, Northwest Zone: October 27, 2018 through Jan 20, 2019 and for all of South Zone: November 3, 2018 through January 27, 2019).

Harvest and Effort

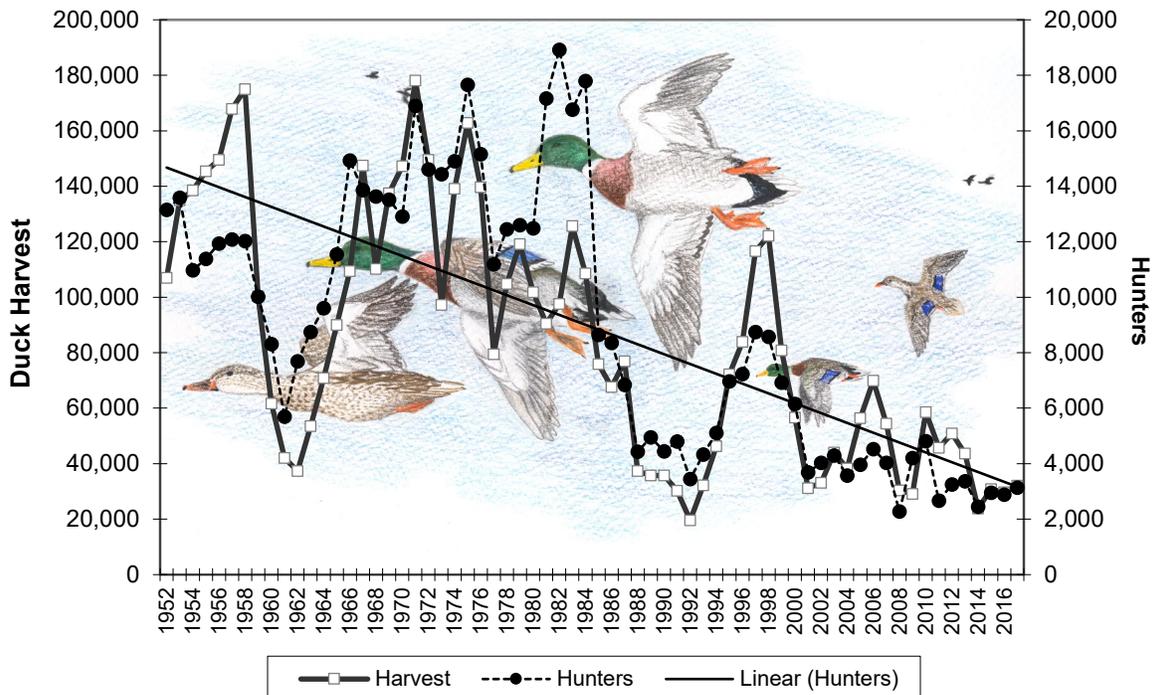

Data has historically been obtained through NDOW's Post-season Small Game Questionnaire. However due to changes in online processes, no questionnaire was available to the public for the past season. Some data from the U.S. Fish and Wildlife Service, in the form of Harvest Information Program (HIP) is available, but, because of the large volume of HIP data to be analyzed it typically is a year behind the actual harvest year. This report will clearly reflect the absence of usual data and will be greatly truncated from past years.

Table 1. Comparisons between HIP and Nevada Post-season Questionnaire estimates.

Year	Estimated Duck Hunters			Estimated Total Duck Harvest		
	HIP ⁽¹⁾	NV Questionnaire	% Diff.	HIP	NV Questionnaire	% Diff.
2008	2,600	2,275	-13%	29,900	30,396	2%
2009	3,500	3,952	13%	41,000	29,091	-29%
2010	3,600	4,524	26%	48,200	58,592	22%
2011	3,200	2,565	-20%	63,800	45,746	-28%
2012	3,900	3,247	-17%	51,000	50,892	-2%
2013	3,600	3,068	-15%	38,300	43,700	14%
2014	2,700	2,448	-9%	30,000	23,810	-21%
2015	2,400	2,651	11%	27,200	30,800	13%
2016	2,700	2,884	7%	32,400	29,650	-9%
2017	2,600	3,004	16%	30,400	32,018	5%
2018	3,400	NA	--	46,300	NA	--

(1) Expressed as "Active Adult Hunters" within the HIP survey.

Figure 1. Nevada Duck Hunting Statistics 1952-2017
Source: Nevada Post-season Questionnaire

GEESE

For the 2018–2019 goose hunting season, Nevada used a three-hunt-zone configuration. For the 2018–2019 goose hunting season the Northeast Zone for dark geese (Canada geese and Brant and White-fronted Geese) began on September 22, 2018 and extended until January 6, 2019. The dark goose seasons for the Northwest Zone began October 6, 2018 and extended until January 20, 2019. The South Zone season began on October 13, 2018 and extended to January 27, 2019.

A two-day closure was instituted on October 22 and 23, 2018. These closures accommodated days set aside for youth waterfowl hunting, which was two days in each of the three zones. The Commission adopted a later opening date (October 27, 2018) for the Moapa Valley portion of Clark County within the South Zone. The white goose (snow and Ross' goose) season for the South Zone and Moapa Valley portion of Clark County ran concurrent with dark goose seasons, but the Northeast and Northwest Zones opened in conjunction with the later dates for dark geese to accommodate the late white goose hunt season.

Regular season dates for the Northeast Zone ran from October 24, 2018 until January 6, 2019 and the Northwest Zones ran from October 24, 2018 until Jan 20, 2019. The Northeast and Northwest Zones opened for a late white goose season from February 23, 2019 until March 10, 2019. Limits for the Canada geese and brant were four daily with twelve in possession. White-fronted geese limits were ten daily with 30 in possession. Limits for white geese (Snow and Ross" geese) singly or in the aggregate were 20 daily with 60 in possession.

TUNDRA SWAN

The Nevada tundra swan season commenced on October 6, 2018 and concluded on January 6, 2019. Permits were available for over the counter and on-line sales beginning August 20, 2018. One hundred sixty-six applications for the 650 permits were available for the season, and all 650 had been purchased by Thanksgiving weekend. This total included 167 second permits, thus there were 483 individual permittees last year. Total sales for the 2018–2019 season were higher (12%) than the previous year representing a continued rebound from the past extended drought.

Continuing a flyway commitment to detect trumpeter swan harvest, NDOW required all successful hunters to have their swan and permit validated within five days of the harvest date. Agency personnel inspected swans at specific NDOW offices where they could examine the birds' bills and feather coloration. This scrutiny is necessary to detect occurrence of trumpeter swans. In this manner, take can be documented and its impact to the latter species can be assessed.

Table 4. Past ten years of Nevada swan harvest.

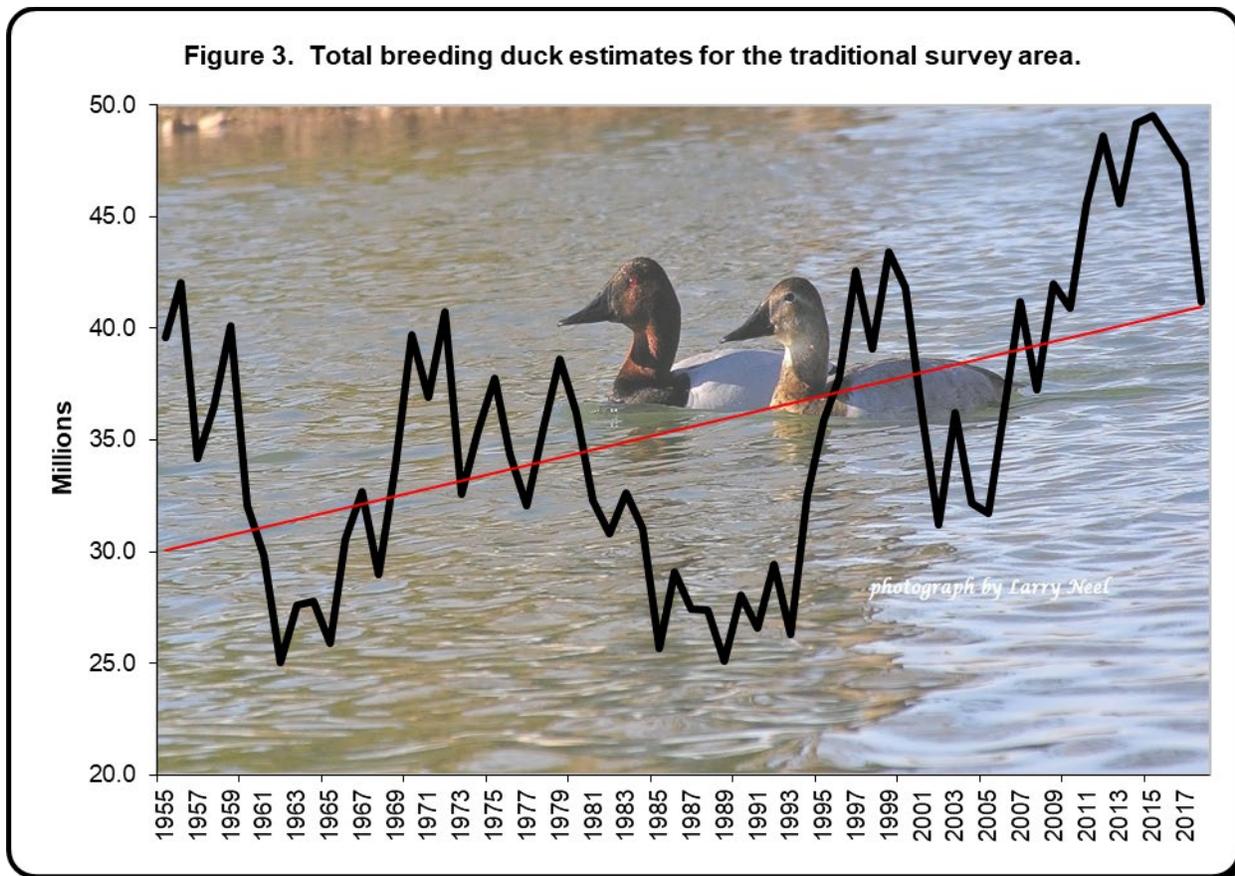

Year	Tags / Permits Purchased	Percent Participating	Reported Harvest	Expanded Hunter Days
2009	472	60%	56	1,424
2010	469	75%	118	1,831
2011	527	76%	145	2,061
2012	650	77%	203	2,281
2013	488	55%	26	1,320
2014	234	56%	25	890
2015	105	57%	8	265
2016	404	73%	133	1,127
2017	579	70%	127	1,847
2018	650	73%	236	1,779
'09-'18 Avg.	458	67%	108	1,483

For the 2018–2019 season, juvenile swans made up 22% of the total swan harvest ($n = 51$), a figure that is below the long-term average of 32%. Seventy-three percent of permittees hunted last year. One hundred sixty-five swans (70%) were reported taken at Stillwater NWR, in contrast to the long-term average of 61% of the harvest being from that location. No trumpeter swans were taken in the 2018–2019 season. Nevada’s allowable Trumpeter take is a total of five.

Population Status

Each year the FWS conducts a continental assessment of the status of waterfowl¹. The FWS follows established survey protocols to evaluate bird abundance and habitat conditions within traditional survey areas in the central and northwest portions of North America, known as the Prairie Pothole Region and the Canadian Parkland Region, and in Northwest Canada and Alaska. Service statisticians then incorporate these data into annual or multi-year population models.

Biologists estimated the 2018 continental spring breeding duck population (BPOP) within the traditional survey area at 41.2 million birds (Figure 3). This total is similar 13% lower than the 2017 estimate (47.3 Million) but is 17% higher than the long-term average. Nevada Breeding pair population estimates for 2018 were 91,000 ducks. This number is an increase (57%) from 2017’s estimate of 58,000 ducks.

U. S. Fish and Wildlife Service. 2018. *Waterfowl population status, 2018*. U.S Dept. of the Interior, Washington, D.C. USA.

For the traditional survey area, many species showed stable numbers compared to the previous year, and, most are still above the long-term average (Table 5).

Table 5. Five-year North American duck BPOP estimates (in thousands) and long-term average (LTA) for 10 species within the traditional survey area.

Species	2014	2015	2016	2017	2018	LTA	% change	
							v.2017	v LTA
Mallard	10900	11643	11793	10488	9255	7855	-12%	17%
Gadwall	3811	3834	3712	4180	2885	2018	-31%	43%
Pintail	3220	3043	2618	2889	2365	3949	-18%	-40%
BW Teal	8542	8547	6689	7889	6450	5080	-18%	27%
GW Teal	3440	4081	4275	3605	3042	2150	-16%	42%
Wigeon	3117	3037	3411	2777	2820	2619	2%	8%
Shoveler	5279	4391	3967	4353	4207	2597	-3%	62%
Scaup	4611	4395	4992	4372	3989	5005	-9%	-20%
Redhead	1279	1196	1289	1115	999	724	-10%	38%
Canvasback	685	757	736	733	686	589	-6%	16%

Traditional Mid-winter inventories were discontinued after 2018. The survey's modern-day applicability has been in question for several years. The survey is not comparable from year to year, also, inquiry to partners who have traditionally used the survey (DU and IWJV) found that few if any value was derived from the data. Because of these factors and the inherent danger of wintertime waterfowl surveys, they were dropped from the standard survey schedule.

During the 2018 field season, biologists captured and banded 903 ducks and 343 geese at several sites in the state. The recovery and report of these bands, mostly by hunters, will help estimate waterfowl abundance and distribution patterns.

MOURNING AND WHITE-WINGED DOVE

Harvest

Nevada's traditional dove season comprised 60 days, beginning on September 1, 2018 and running until October 30, 2018. The bag and possession limits were 15 and 45, respectively. Mourning and white-wing dove hunting was statewide.

The FWS conducts harvest surveys through its Harvest Information Program (HIP) survey. The same protocols used to estimate waterfowl harvest are applied to the dove findings collected through this survey. Data has historically been obtained through NDOW's Post-season Small Game Questionnaire. However due to changes in online processes, no questionnaire was available to the public for the past season. Some Data from the U.S. Fish and Wildlife Service, in the form of Harvest Information Program (HIP) is available, but, because of the large volume of HIP data to be analyzed it typically is a year behind the actual harvest year. This report will clearly reflect the absence of usual data and will be greatly truncated from past years.

Table 6. Comparisons Between Estimated Dove Harvest Statistics for Nevada.

2018	2,700	NA	--	6,200	NA	--	21,400	NA	--

Expressed as "Active Adult Hunters" within the HIP survey. (2) Figures are *individual* hunters

Hunter numbers estimated through Both the HIP process and NDOW's survey describes a decrease in hunter numbers. No data for Nevada Mourning Dove harvest was available in the absence of a harvest questionnaire.

White-winged Dove

No data for Nevada White-winged Dove harvest was available in the absence of a harvest questionnaire.

Eurasian Collared Dove

No data for Nevada Eurasian Collared Dove harvest was available in the absence of a harvest questionnaire.

Population Status

The FWS collectively with the three mourning dove management units (Flyway based) uses a predictive model to monitor and assess mourning dove populations across the continent. This predictive model uses data retrieved from both nation-wide banding efforts as well as parts collection surveys to assess mourning dove populations.

The model uses collected data and abundance estimates over time to determine maximum population growth rate and carrying capacity, from which the critical thresholds for harvest are derived.

During the 2018 field season, biologists captured and banded 200 mourning doves at several sites in the state. The recovery and report of these bands, mostly by hunters, will help estimate dove abundance and distribution patterns.

BAND-TAILED PIGEON

No survey and inventory activities were conducted for this job during this report period.

AMERICAN CROW

Harvest

Crow hunting was open statewide with two hunt periods. The fall hunt was September 1 to November 17, 2018 and the spring hunt extended from March 1 to April 15, 2019. The limit was 10 daily and 10 in possession and hunters were required to retrieve their crows and remove them from the field.

No data for Nevada Crow harvest was available in the absence of a harvest questionnaire.

Population Status

Crows are not classified as migratory *game* birds under federal rule thus the U.S. Fish and Wildlife Service does not regulate the take of American Crows. Accordingly, there are no coordinated efforts within the flyways to determine their population status. NDOW does not conduct any population analysis other than an analysis of harvest data. The species is ubiquitous and since it is lightly hunted within a broad statewide distribution, managers feel that the harvest data is not indicative of crow population trends.

STATEWIDE SUMMARIES FOR FURBEARER ANIMALS

Season Structure

The 2018–2019 trapping season for most of Nevada’s furbearer species (beaver, muskrat, mink, otter, and kit and red fox) began October 1, 2018. The seasons extended through April 30, 2019 for beaver, muskrat and mink, March 31, 2019 for otter and February 28, 2019 for kit and red fox. The 2018–2019 gray fox season and bobcat season ran concurrently from November 1, 2018 ending February 28, 2019.

Harvest and Prices

Statewide bobcat harvest for the 2018–2019 season was 2,337 (Table 1). This was a 41.8% decrease from the 2017–2018 season (4,018). The 2018–2019 harvest was 9% lower than the 10-year average of 2,569 and 1% higher than the long-term average of 2,309 bobcats per season. Statewide bobcat production was 27 kittens/100 adult females. Bobcat production for 2018 was 54% lower than the past 10-year average and 55% below the long-term average. During the 2018–2019 season, average bobcat pelt prices increased 38% to \$397.56 as compared to the 2017–2018 season average of \$288.49.

Table 1. Bobcat harvest by region.

Bobcats/Trapper	5.8	8.9	6.3	5.2	6.5	4.8	5.8	9.3	6.2

Overall, statewide harvest of furbearing animals during the 2018–2019 season was 25% below long-term averages. Harvest of all furbearing species decreased 37% when compared to the 2017–2018 season (Table 2). Coyote harvest during the 2018–2019 season decreased 38% from the previous season. The number of licensed trappers during the 2018–2019 season (996) decreased 11% from the previous year (1,115). This number is above the 30-year average of 709 trappers.

During the 2018-19 furbearer season 557 trappers (56%) reported participating in the harvest of furbearers, matching average number of reported (56%) of licensees using their furbearer license over the past decade. Fur prices for the past season increased for some species and decreased for others. Please see furbearer tables in the appendix for complete harvest and fur prices.

A table in the appendix of this volume titled “Summary of Statewide Fur Harvest” summarizes annual harvest from the 1970-1971 season until this reporting (2018-2019). Within this report there are two separate lines depicting harvest data from the 2017-2018 season. The first of these two lines, if totaled, show a combined harvest estimate of all species at 12,775. This estimate comes from the initial extrapolation of the post-season questionnaire data with a 66.9% reporting rate.

After the initial data reporting which was included in the Department’s 2018 Small Game Status Report, additional furbearer harvest questionnaires were received by the Department. These questionnaires came in as a result of changes to NAC 503.160 requiring compliance with questionnaire return. After application of this NAC, additional responses to the questionnaire brought the response rate to 75.2%.

With this additional information, the data becomes more precise. The data was reanalyzed and the orange line within the summary table was calculated. This recalculation indicates a 3% decrease in harvest from the original data.

Populations

Furbearer harvest data are obtained each year by summarizing and expanding postseason questionnaire information obtained from licensed trappers. These data have been comparable for decades. Additionally, the Department obtains bobcat harvest data and trapper effort through a mandatory check-in process. Trappers are required to retain and remit a portion of the lower jaw preserving one or more canine teeth. Biologists can later extract the canines and determine the age classification of the animal, adult or juvenile, based upon tooth characteristics. Various data from harvest and age characteristics of harvested bobcats are used to assess population status and trends.
