

**PRONGHORN ANTELOPE
HUNTER INFORMATION SHEET
Units 065**

LOCATION: Southern Elko County/Northwestern Eureka County. See descriptions in the **Nevada Hunt Book**.

ELEVATION: From 5,200' in the valleys to 8,200' on the ridges of the Pinon and Sulphur Ranges.

TERRAIN: Valleys, benches, and moderately steep mountains.

VEGETATION: Desert shrub in lower valley bottoms to sagebrush and Pinyon/Juniper on the benches and hills. Mahogany, aspen and mountain brush can be found in the upper elevations.

LAND STATUS: A good share of this unit group is public land administered by the Bureau of Land Management but there are significant amounts of private land where access is somewhat limited.

HUNTER ACCESS: Generally good throughout the majority of the harvest unit. It is important to seek permission from private landowners or be familiar with land ownership patterns prior to hunting.

MAP REFERENCES: Topographical and land status maps are available from the BLM (Elko & Ely) or private vendors (Map House-Elko). USGS 1:100,000 topographical maps that cover the area include: **Elko, Ruby Lake, and Crescent Valley**.

FACILITIES AND SERVICES: Towns of Elko, Eureka and Carlin provide most services. Primitive camping is allowed throughout public lands within the unit group.

RECOMMENDED HUNTING AREAS FOR ANTELOPE: Hunters should concentrate efforts in areas with natural water sources or stock water developments at mid elevations. In addition, antelope might be found near meadows or agriculture in Huntington and Pine Valleys. Hunters should pay attention to recent rainstorms that tend to leave pools of water in playas, on roads or in rock depressions that can also provide water for antelope at this time of year.
